Figure 10 consists of four heatmaps, (a) through (d), showing the distribution of the number of channels per user. The x-axis for all plots is 'Number of Channels' (0 to 100) and the y-axis is 'Number of Users' (0 to 100). The color scale represents the density of users for a given number of channels.

- (a) 100 users, 100 channels:** The distribution is concentrated at low channel numbers (0-20) for low user counts (0-20) and spreads out as the number of users increases.
- (b) 100 users, 200 channels:** The distribution is more spread out across the channel range (0-100) compared to (a).
- (c) 100 users, 500 channels:** The distribution is very spread out, covering almost the entire range of channels (0-100).
- (d) 100 users, 1000 channels:** The distribution is extremely spread out, covering the entire range of channels (0-100).
